## Main findings

Note: Due to the high standard errors associated with regional labour force survey data, the ABS and QGSO recommend using 12-month averages to reduce the volatility of the underlying original data. This volatility means it can be difficult to detect real world phenomena, such as those caused by the social distancing measures introduced to combat COVID-19, in the data. **As a result, it is not recommended regional labour force data be used to assess the impact of COVID-19.**

All data in this brief are based on 12-month moving averages.
